

OCEAN CURRENTS

SPRING · MARCH – MAY

SURFACE CIRCULATION OF THE WORLD OCEAN

— warm current — cold current — surface flow, weaker → stronger

Flow lines are traced through a field interpolated from the drawn current paths — a picture of the circulation, not measured velocity. Temperature: NOAA ERSST v5, 1991-2020, 90 monthly fields. northern spring, southern autumn. Coastlines: Natural Earth 1:50m.
